

Creating Completeness and Uniformity Among Environmental Health Practitioners

Inspection Form Design

Time and Workload

Assessing Completeness

Creating a Guide/Checklist

Training, Consistency, and Collaboration

Change the flow of the inspection form

Focus on quality over quantity

Forgetting to write in every aspect prior to giving yellow copy

Creating a guide of why it's a violation

Training to know what needs to be written

Elimination of "unimportant" fields on inspection report

Average time to complete inspection expectations

Completeness vs. correctness: What by definition is correctness?

Providing examples of violations

Sit down as a big group and talk instead of small groups

Form Design

Less workload so we have more time and aren't as rushed during inspections

Explain/review each "info" area with operators as you go over report to make sure info filled in and correct

Show examples of violations to ALL sanitarians

Continue with group collaborations to help maintain group consistencies

Review inspect report to check for completeness in your car after inspection

Creating a checklist

Provide consistent trainings so that everyone is on the same page

Checklist of what needs to be completed
